we create new levels

**We  
create  
new levels.**

**STANDARD AND  
SPECIAL SOLUTIONS  
FOR FORKLIFT  
ATTACHMENTS AND  
STATIONARY EQUIPMENT**

Through pioneering spirit, experience and innovative strength, we continually bring functionality and quality to a new level.

We create both standard and bespoke solutions for forklift attachments – from simple to complex and go beyond the limits of what is currently feasible. We also supply stationary equipment, covering everything from planning to the implementation of a well-thought-out safety concept, all from a single source.

Our products are developed, designed and manufactured exclusively in Germany – with an exceptional level of vertical integration and variety. First-class quality, comprehensive service and durable products come as standard.

Our attachments continually set the bar in efficient material handling. Our ambition is to not only meet our customers' expectations but to exceed them.

---

## Milestones in our development

---

Since the 1970s, stabau GmbH, formerly Schulte-Henke GmbH, has been manufacturing and distributing attachments for forklifts under the product name stabau. For decades, our name has been synonymous with longevity, first-class quality and innovation. We have always been committed to sustainability through our methods, materials and loyalty to our local site.

### **RELIABLE OPERATION WORLDWIDE**

Manufacturers of forklifts and construction machinery, and their dealers, appreciate our diverse production programme and the variety of options. The load capacities of the attachments extend up to 80,000 kg.

Our company is based in Meschede, which is also our sole production location. A team of approximately 190 skilled and client-focused employees manufacture attachments, stationary equipment, telescopic forks and special designs using state-of-the-art equipment. The high degree of in-house manufacturing enables us to operate independently and respond swiftly.

## STABAU OVERVIEW

- 1974** Founding of the company  
Development of the fork positioner with shaft guidance

---

- 1975** Bolted forks as standard

---

- 1976** Production of attachments for integration into the mast

---

- 1977** Relocation of administration and production to the current site  
Market launch of rotating devices with worm drive

---

- 1983** Start of production of attachments for large forklifts with load capacity of over 20 t

---

- 1992** Construction of the 4th production hall

---

- 1994** Development of the first quick-change device for forklifts

---

- 2001** In-house production of telescopic forks with hydraulic forced synchronisation

---

- 2002** Delivery of the first rotating device with a load capacity of 45 t

---

- 2005** Construction of production halls 8 and 9  
Acquisition by HUBTEX Maschinenfabrik

---

- 2008** Production of the world's largest fork positioner with a load capacity of 55,000 kg / 1,200 mm

---

- 2010** Implementation of hydraulic forced synchronisation for additional attachments

---

- 2017** Introduction of a quick-change device with fully automated connection of hydraulic circuits

---

- 2019** Development and launch of the new appliance and carton clamp

---

- 2023** Development and introduction of the telescopic carton clamp with a patented hydraulic solution

---

- 2024** Company's 50th anniversary

---

- 2025** Rebranding from Schulte-Henke GmbH to stabau GmbH

**Innovation  
Quality  
Longevity  
Sustainability**

# We prioritise innovation and are pioneers by nature

---

## WE TAKE PRIDE IN THE DURABILITY OF OUR PRODUCTS AND PARTNERSHIPS

Thanks to our many years of expertise and the trust that our customers place in us, we guarantee the quality and reliability of our products.

These enduring relationships make us proud and form the foundation of our shared success.

---

**Our experience in every area, from consultancy to development to production, is the key to your success!**

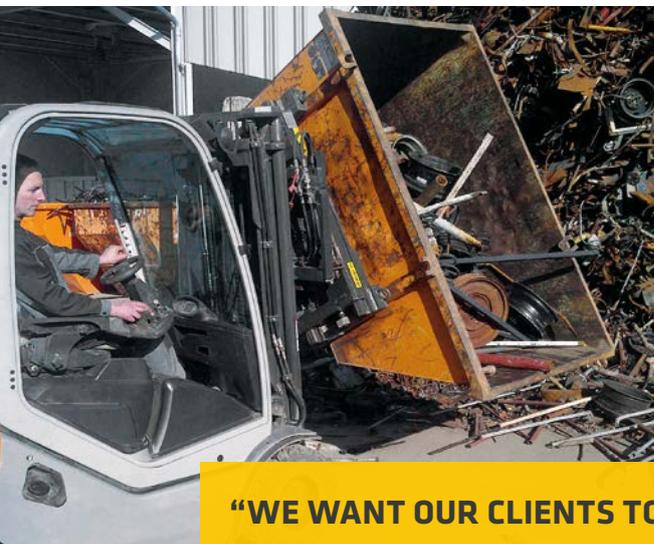

## MEMBER OF THE HUBTEX GROUP

As part of the HUBTEX Group, we are part of a strong network with extensive expertise and specialist knowledge, which supplies customers all over the world with outstanding products and customised solutions.

With a clear international vision, we aim to grow healthily and sustainably, always thinking and acting in a future-oriented and forward-looking manner.

# We guarantee quality

**“WE WANT OUR CLIENTS TO RECOMMEND US WITH PRIDE AND CONFIDENCE!”**

In various industrial sectors, including the wood, beverage and metal industries, stabau attachments are often considered essential equipment.

## WE IMPRESS WORLDWIDE WITH OUR ‘MADE IN GERMANY’ QUALITY PROMISE

All processes are subject to continuous process and quality monitoring in accordance with DIN EN ISO 9001:2015 and the welding quality requirements of DIN EN ISO 3834--2. Standard attachments are regularly redesigned, and new series are developed as part of ongoing product improvement.

stabau holds DIN EN ISO 14001:2015 certification, meeting globally recognised requirements for an effective environmental management system.

Due to our engineers’ extensive experience, stabau has become the go-to name for special designs in the forklift truck industry.

---

# A strong team for sustainable success

---

## **SETTING NEW STANDARDS TOGETHER**

The extensive experience, specialised knowledge and diverse skills of our team form the foundation of our business success.

The dedication, passion and commitment of our employees have shaped who we are today.

Our aim is to always think beyond the possible. Together as a team, we consistently set new benchmarks.

At stabau, training young talent is a top priority. From the very first day, we impart our philosophy and expertise to young, motivated employees who will further bolster our team in the future.

**TOGETHER, WE  
CONSTANTLY IMPLEMENT  
INNOVATIVE AND  
FORWARD-THINKING  
SOLUTIONS.**

# Tailor-made solutions for every industry

## WOOD

The transport of goods in the wood industry ranges from the collection of tree trunks, sawn timber, processed wood products such as parquet and laminate to chipboard for house and furniture construction.

Wood grapples, fixed fork spreaders and fork positioners in various designs are used to handle these products.

## METAL

During the production of metals, various materials must be transported in different states. This includes scrap and raw materials for melting, liquid metals for casting, forgings for forming, and finished products such as sheet and wire coils, slabs, bars and plates. Scrap grabs, fork clamps, charging devices, rotating and ladle tilting devices, forging manipulators, coil booms, coil clamps and fork positioners are used for this transport.

## BUILDING MATERIALS

In the building materials industry, in addition to stone and concrete products that can also be loaded without pallets, bagged goods and loose goods such as sand and gravel are handled. Special attachments are used depending on the nature of these goods. Block and brick clamps and concrete pipe clamps, multiple load handlers, multiple side-shifters, load pushers, pallet inverter and buckets facilitate the handling of these materials.

## BEVERAGES

The logistics in the beverage industry are designed for high throughput volumes. A large number of pallets consisting of beverage crates, containers or barrels need to be handled economically. The handling of multiple pallets reduces travel distances and allows for quick loading of trucks. Typical attachments include multiple load handlers, which enable the simultaneous transport of up to 8 pallets.

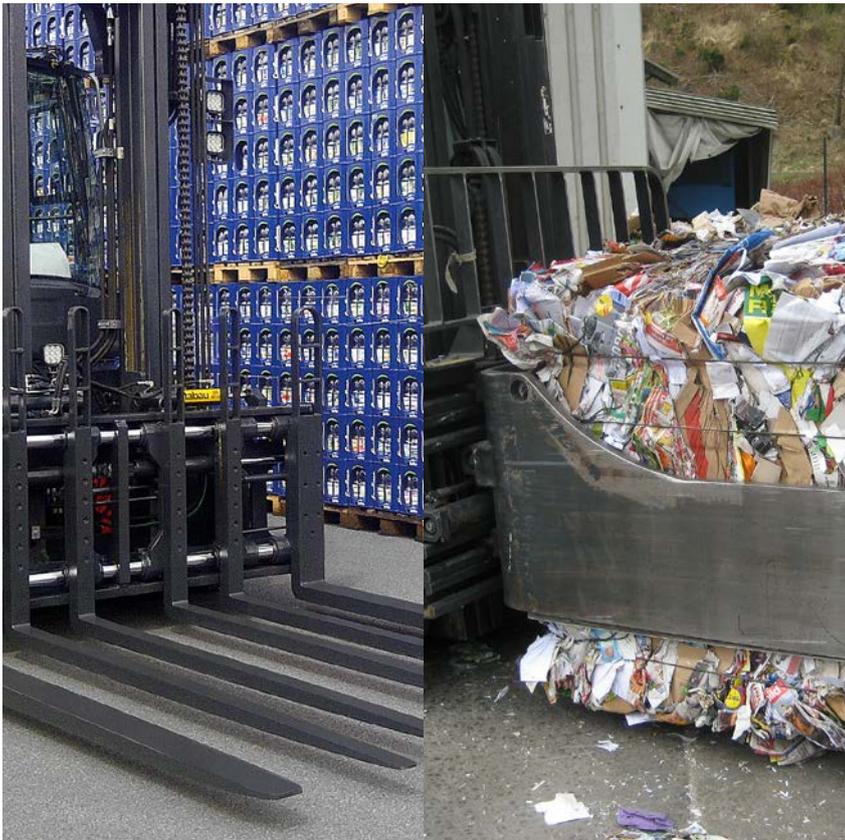

## RECYCLING

The waste disposal and recycling industry focuses on the disposal and recycling of various materials. Materials such as waste paper and cardboard, plastics and textiles are regularly transported in bale form.

Metals are usually collected in bins and containers that are later processed for recycling. Handling of these materials requires bale clamps, pivoting fork clamps, fork clamps, scrap grapples and rotators.

## LOGISTICS

The logistics industry deals with a wide range of goods that need to be handled and transported. These come with or without load carriers, in standard dimensions or customised sizes, and across all weight classes. Typically, fork positioners, fork clamps, fixed fork spreaders, bale clamps, telescopic forks, crane jibs and appliance clamps are used, sometimes in combination with sideshift.

# stabau products

---

## Our standard solutions – highest quality guaranteed

---

### **FORK POSITIONERS**

stabau offers one of the largest ranges of fork positioners. In addition to the popular double shaft -guide for tough applications, additional series of profile-guided fork positioners are available. All models can be combined with telescopic forks.

### **MULTIPLE LOAD HANDLERS**

In the beverage industry and logistics sector, multiple load handlers are used to economically transport up to 8 pallets at once. Together with clients, stabau has developed and tailored these attachments to the number of pallets and tonnage.

### **FORK CLAMPS**

The attachment is designed for clamping loads between the forks. The fork clamps are robustly built to meet the high demands of the recycling and metal industries, among others.

## ROTATORS

The hydraulic rotator is used for lateral emptying of containers across all industries. The high-quality drive, powered by worm shaft and worm wheel, is a preferred choice in foundries and throughout the metal industry worldwide.

## TELESCOPIC FORKS

Telescopic forks are widely used in logistics for the loading and unloading of trucks from one side or for the double-depth storage of goods in racks. Since 2001, the manufactured telescopic forks feature hydraulic synchronisation.

## BALE CLAMPS

The pulp, recycling and foam clamps from stabau are designed for tough applications in the paper and recycling industries. Their robust construction and varied arm designs are key to their long lifespan.

## ROLL CLAMPS

The roll clamp is suitable for transporting and rotating paper rolls, concrete pipes and other cylindrical goods. Depending on the goods being transported, the dimensions and coating of the contact plates can be customised. The paper roll clamp has a 180° rotation range.

## APPLIANCE CLAMPS

For pallet-free transportation of household and entertainment devices, stabau provides a variety of carton and appliance clamps. Various arm designs and rubber coatings ensure the safe handling of these pressure-sensitive goods.

---

# Special solutions for customised attachments

---

## WE'LL FIND A SOLUTION, EVEN IF IT IS DIFFICULT

This has been our objective since day one. Our special solution is developed in line with the industry and product specifications of our clients, such as those in the metal, construction materials and wood industries, as well as waste disposal, commercial vehicle manufacturing, the beverage sector and logistics.

For decades, we have tackled technical challenges ranging from small to very large projects with unparalleled experience and care, even when approaching the limits of possibility. This is integral to the stabau quality standards.

## STATIONARY EQUIPMENT – EFFICIENT. SAFE. SMARTLY DESIGNED.

From planning to implementation – everything is offered from a single provider. Our systems facilitate pallet changes, plate rotations and the exchange of damaged goods, optimising your processes and increasing efficiency.

# All-round service for our attachments

## OUR COMMITMENT TO SERVICE

- Comprehensive customer advice and solution development provided by skilled employees
- Conscientious and flexible handling of individual client requests
- The highest standards of quality and reliability throughout the entire stabau team
- Transparent and straightforward presentation of our services and prices

## FOR US, SERVICE BEGINS LONG BEFORE THE DELIVERY OF THE ATTACHMENTS.

Solution-focused advice and skilled service is offered from the very first meeting, whether it involves standard attachments or special solutions. This high standard continues in the support we provide to our customers after the attachments have been delivered.

Our experienced stabau team members also provide expertise and prompt assistance when managing your transportation tasks.

## RENTING ATTACHMENTS IN THE EXPECTED STABAU QUALITY STANDARD OFFERS A COST-EFFECTIVE ALTERNATIVE FOR TEMPORARY USAGE.

Short-term supply can bridge repair times, cover production peaks or solve one-off handling tasks.

Our clients can rely on knowledgeable contacts for individual, application-specific advice.

## PRE-OWNED ATTACHMENTS

With our pre-owned attachments, you can still be sure that you are purchasing attachments of the highest stabau quality. We clean and thoroughly test the attachments for functionality. Where necessary, attachments are repainted and worn parts are replaced. We offer up to a 12-month warranty on pre-owned attachments.
